**FUNCTION :** Continuous Cup Elevators convey bulk material horizontal-vertical-horizontal from one or multiple feed point(s) to one discharge point. Without the need of intermediate transfers they deliver smooth and continuous travel from the feed point horizontally and then via elevation to the top horizontal section to the discharge! Continuous Cup Elevators are designed to handle products ranging from **Delicate Granule Dry Vegetables (Beans, Coffee, Peanut, ect)** and other industrial products (**Chemicals , Pharmaceuticals, Highly Abrasive, Sand, Gravel est.)**

**WORK PRINCIPLE :** AKYUREK CONTINUOUS Cup Elevators handle your product in the most gentle way. The product is placed in the Cups via a magnetic feeder device and from that point on the product will move undisturbed until it is discharged. There will be no material break up, no material deterioration and no mixture separation that you find in other conveyor types.
